

# The engord package

Heiko Oberdiek  
<heiko.oberdiek at gmail.com>

2010/03/01 v1.8

## Abstract

The package generates the suffix of English ordinal numbers. It can be used with plain and L<sup>A</sup>T<sub>E</sub>X formats.

# 1 Usage

`\engord{<LATEX counter name>}`

It prints the value of the L<sup>A</sup>T<sub>E</sub>X counter as English ordinal number. It can be used in the same way as `\arabic`, `\roman`, or `\alph`. The command is not available in plain T<sub>E</sub>X.

`\engordnumber{<any TEX number>}`

It prints the number as English ordinal number.

`\engordletters{#1}`

This command formats the English ordinal letters after the number. It defaults to `\textsuperscript`.

`\engorderror{#1}`

It can be redefined, if an other error handling is wanted. The argument is a negative number or zero.

`\engordraisetrue`  
`\engordraisefalse`

These commands set the switch `\ifengordraise` that is asked by the default `\engordletters` before raising the ordinal letters.

## 1.1 Package options

**normal:** `\engordraisefalse`

**raise:** `\engordraisetrue`

Default is raise.

## 1.2 Examples

- ```
\usepackage[normal]{engord}
\engordnumber{1}    → 1st
\engordnumber{12}   → 12th
\engordnumber{123}  → 123rd
\engord{page}       → 1st (if page has the value of one)
\engordraisetrue
\engordnumber{12}   → 12th
```
- The default output of a counter can be redefined:

```
\newcounter{mycounter}
\renewcommand{\theengcounter}{\engord{mycounter}}
```
- Because the implementation of `\engord` and `\engordnumber` is kept expandable, these commands can be used to make command names with an appropriate definition of `\engordletters`:

```
\renewcommand*{\engordletters}[1]{#1}
\@namedef{My\engordnumber{3}Command}{...}
```

This generates the command name ‘\My4rdCommand’. Since version 1.2 the redefinition can be dropped if the letters are not raised.

- If the letters should not be raised, use L<sup>A</sup>T<sub>E</sub>X package option `normal` or use

```
\engordraisefalse
```

Also `\engordletters` could be redefined for this purpose:

```
\renewcommand*\engordletters}[1]{#1}
```

## 2 Implementation

### 2.1 Reload check and identification

```
1 (*package)
```

Reload check, especially if the package is not used with L<sup>A</sup>T<sub>E</sub>X.

```

128   \RequirePackage{ltxcmds}[2010/03/01]%
129 \fi

```

## 2.3 User macros

`\ifengordraise` The switch `\ifengordraise`, whether the ordinal letters are raised or not. Default is raised because of compatibility.

```

130 \ltx@newif\ifengordraise
131 \engordraisetrue

```

In L<sup>A</sup>T<sub>E</sub>X this also can be controlled by option `normal` or `raise`.

```

132 \begingroup\expandafter\expandafter\expandafter\endgroup
133 \expandafter\ifx\csname DeclareOption\endcsname\relax
134 \else
135   \DeclareOption{normal}{\engordraisefalse}%
136   \DeclareOption{raise}{\engordraisetrue}%
137   \ProcessOptions*\relax
138 \fi

```

`\engordletters` `\engordletters` is called with one argument, the english ordinal letters, and contains the code to format them. It defaults to `\textsuperscript` depending on `\ifengordraise`.

```

139 \expandafter\ifx\csname engordletters\endcsname\relax
140   \EO@def\engordletters{%
141     \ifengordraise
142       \expandafter\engordtextsuperscript
143     \fi
144   }%
145 \fi

```

`\engordtextsuperscript` For plain T<sub>E</sub>X the definition is quite ugly, redefine `\engordtextsuperscript` if you have a better one.

```

146 \expandafter\ifx\csname engordtextsuperscript\endcsname\relax
147   \begingroup\expandafter\expandafter\expandafter\endgroup
148   \expandafter\ifx\csname textsuperscript\endcsname\relax
149     \def\engordtextsuperscript#1{%
150       \relax

```

```

151      \ifmmode
152      ~{\rm#1}%
153      \else
154      ${\rm#1}$%
155      \fi
156    }%
157  \else
158  \def\engordtextsuperscript{\textsuperscript}%
159  \fi
160 \fi

\engorderror \engorderror is called, if the number is zero or negative.
161 \expandafter\ifx\csname engorderror\endcsname\relax
162 \EO@def\engorderror#1{%
163   #1\engordletters{!ERROR!}%
164   \@PackageWarning{engord}{%
165     `#1' is not an ordinal number%
166   }%
167 }%
168 \fi

\engord \engord expects a LATEX counter name as argument and calls \engordnumber. It
is defined only, if LATEX is used.
169 \begingroup\expandafter\expandafter\expandafter\endgroup
170 \expandafter\ifx\csname newcounter\endcsname\relax
171 \else
172 \EO@def\engord#1{%
173   \engordnumber{\value{#1}}%
174 }%
175 \fi

\engordnumber \engordnumber is the user command to print a number as english ordinal number.
The argument can be any TEX number like explicit numbers, register values, ...
In a safe way it converts the TEX number argument into a form that only
consists of decimal digits.
176 \EO@def\engordnumber#1{%
177   \expandafter\EO@number\expandafter{\number#1}%
178 }

```

## 2.4 Suffix generation

```

\EO@number \EO@number expects a number with decimal digits as argument and looks at the
size of the number and the count of the digits:
179 \def\EO@number#1{%
180   \ifnum#1<1 % handle the error case
181     \engorderror{#1}%
182   \else
183     \ifnum#1<21 %
184       \EO@ord{#1}%
185     \else
186       \ifnum#1<100 %
187         \EO@twodigits#1%
188       \else
189         \@ReturnAfterFi{%
190           \EO@reverse#1\@nil}\EO@afterreverse
191         }%
192       \fi
193     \fi
194   \fi
195 }

```

`\@ReturnAfterFi` An internal help macro to prevent a too deep `\if` nesting.

```

196 \long\def\@ReturnAfterFi#1\fi{\fi#1}

```

`\EO@ord` `\EO@ord` prints the number with ord letters.

#1: decimal digits, #1 < 21

```

197 \def\EO@ord#1{%
198   #1%
199   \expandafter\engordletters
200   \ifcase#1{th}\or
201     {st}\or
202     {nd}\or
203     {rd}\else
204     {th}%
205   \fi
206 }

```

`\EO@twodigits` `\EO@twodigits` expects a number with two digits,  
20 < number < 100

```

207 \def\EO@twodigits#1#2{%
208   #1\EO@ord{#2}%
209 }

```

`\EO@reverse` `\EO@reverse` reverses the digits of the number.

#1: next digit  
#2: rest of the digits  
#3: already reversed digits  
#4: next command to call with the reversed number as argument

```

210 \def\EO@reverse#1#2\@nil#3#4{%
211   \ifx\#2\%
212     #4{#1#3}%
213   \else
214     \@ReturnAfterFi{%
215       \EO@reverse#2\@nil{#1#3}{#4}%
216     }%
217   \fi
218 }

```

`\EO@afterreverse` `\EO@afterreverse` calls `\EO@reverseback` so that `\EO@reverseback` can inspect the digits of the number.

```

219 \def\EO@afterreverse#1{%
220   \EO@reverseback#1\@nil
221 }

```

`\EO@reverseback` `\EO@reverseback` reverses the reversion.

#1: the last digit of the number  
#2: the second last digit of the number  
#3: first digits of the number in reversed order, it is not empty, because `\EO@reverseback` is only called with numbers > 100.

```

222 \def\EO@reverseback#1#2#3\@nil{%
223   \EO@reverse#3\@nil{}\@firstofone
224   \ifnum#2#1<21 %
225     \EO@ord{#2#1}%
226   \else
227     #2\EO@ord{#1}%
228   \fi
229 }

```

```

230 \EO@AtEnd%
231 \</package>

```

## 4 Installation

### 4.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

[CTAN:macros/latex/contrib/oberdiek/engord.dtx](#) The source file.

[CTAN:macros/latex/contrib/oberdiek/engord.pdf](#) Documentation.

**Bundle.** All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](#)

TDS refers to the standard “A Directory Structure for  $\text{\TeX}$  Files” ([CTAN:tds/tds.pdf](#)). Directories with `texmf` in their name are usually organized this way.

---

<sup>1</sup>[ftp://ftp.ctan.org/tex-archive/](http://ftp.ctan.org/tex-archive/)

## 4.2 Bundle installation

**Unpacking.** Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

**Script installation.** Check the directory `TDS:scripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

## 4.3 Package installation

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain `TEX`:

```
tex engord.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

|                                    |                                                         |
|------------------------------------|---------------------------------------------------------|
| <code>engord.sty</code>            | → <code>tex/generic/oberdiek/engord.sty</code>          |
| <code>engord.pdf</code>            | → <code>doc/latex/oberdiek/engord.pdf</code>            |
| <code>test/engord-test1.tex</code> | → <code>doc/latex/oberdiek/test/engord-test1.tex</code> |
| <code>engord.dtx</code>            | → <code>source/latex/oberdiek/engord.dtx</code>         |

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

## 4.4 Refresh file name databases

If your `TEX` distribution (te`TEX`, mi`TEX`, ...) relies on file name databases, you must refresh these. For example, te`TEX` users run `texhash` or `mktextlsr`.

## 4.5 Some details for the interested

**Attached source.** The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk engord.pdf unpack_files output .
```

**Unpacking with L<sup>A</sup>T<sub>E</sub>X.** The `.dtx` chooses its action depending on the format:

**plain T<sub>E</sub>X:** Run `docstrip` and extract the files.

**L<sup>A</sup>T<sub>E</sub>X:** Generate the documentation.

If you insist on using L<sup>A</sup>T<sub>E</sub>X for `docstrip` (really, `docstrip` does not need L<sup>A</sup>T<sub>E</sub>X), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{engord.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL<sup>A</sup>T<sub>E</sub>X:

```
pdflatex engord.dtx
makeindex -s gind.ist engord.idx
pdflatex engord.dtx
makeindex -s gind.ist engord.idx
pdflatex engord.dtx
```

## 5 Catalogue

The following XML file can be used as source for the [T<sub>E</sub>X Catalogue](#). The elements `caption` and `description` are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is `engord.xml`.

```
331 (*catalogue)
332 <?xml version='1.0' encoding='us-ascii'?>

```

## 6 History

[2000/05/23 v1.0]

- First public release, published in newsgroup [de.comp.text.tex](#):  
“[Re: Ordinalzahlen in LaTeX?](#)”<sup>2</sup>

<sup>2</sup>Url: <http://groups.google.com/group/de.comp.text.tex/msg/738e2cb4c51759d6>

## [2003/04/28 v1.1]

- Bug fix for 30, 40, 50, ..., 100, 130, ...
- `\ordletters` renamed to documented `\engordletters`.

## [2006/02/20 v1.2]

- Support for plain  $\text{T}_\text{E}\text{X}$ .
- Switch `\ifengordraise` added.
- Package options `raise` and `normal` added.
- DTX framework.

## [2007/04/11 v1.3]

- Line ends sanitized.

## [2007/04/26 v1.4]

- Use of package `infwarerr`.

## [2007/09/09 v1.5]

- Catcode section added.

## [2007/09/20 v1.6]

- Short description fixed (George White).

## [2008/08/11 v1.7]

- Code is not changed.
- URLs updated.

## [2010/03/01 v1.8]

- Compatibility with `ini- $\text{T}_\text{E}\text{X}$` .

## 7 Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
